Anti vibration control

EXCLUSIVE EXHAUSTS, EXPERTLY ENGINEERED

ANTI VIBRATION CONTROL

Vibrations are often an issue on boats. MarQuip is a leading specialist in avoiding unpleasant and disruptive vibrations caused by gases running through exhaust systems.

High quality suspension mounts and compensators form the base of our anti-vibration control systems. These parts are carefully selected and designed to meet our customers' most stringent requirements. MarQuip vouches for the anti-vibration control on all our systems and we cooperate with your anti-vibration specialist to design an effective, comprehensive solution.

The way a system is fitted can make a world of difference, with a small margin of error between a silent and a vibrating system. Leave it to the specialists at MarQuip and all will go well!
