EXCLUSIVE EXHAUSTS, EXPERTLY ENGINEERED

BEING GREEN HAS NEVER BEEN SO IMPORTANT

We have a good working relationship with a number of quality suppliers in the field and can deliver a filter that is ideal for your needs. MarQuip does not discriminate among brands; we will offer you the type and make best suited to your requirements and make it an integral part of the complete exhaust system.

Passive and active filters can be integrated inside silencers, and exhaust systems can be optimised by the integration of a filter system. This makes it unnecessary to choose between noise or emission reduction. Ensuring good filtration should not mean that you have to compromise on noise attenuation.

Our quality suppliers provide an array of solutions for emission reductions, which include:

- Soot
- NOX
- SOX
- Carbon monoxides
- Hydrocarbons
- Soot filter
- Selective catalytic reduction (SCR)
- Low sulphur fuel – scrubber
- Catalytic converter
- Catalytic converter

This is an example of a passive filter integrated into a dry silencer.
